IMPORTANT

BATTERY MAINTENANCE and
CHARGING INSTRUCTIONS

1. You MUST charge completely prior to initial use. (Follow charging instructions in your Product Handbook)
2. Charge immediately after each use.
3. Charge before storage. You must charge every 30 days if not in use.
4. Charge the unit for 4-8 hours or until the light on the charger turns green.
5. DO NOT allow this unit to deep discharge the battery.
6. For safety purposes, DO NOT charge for over 24 hours.
7. Turn the unit OFF when not in use.

WARNING!

This PRODUCT IS NOT INTENDED FOR EXTREME or OFF-ROAD Use! Please take care of your scooter!

DO NOT JUMP or ABUSE THIS PRODUCT!

DO NOT RIDE IN WET/ICY CONDITIONS!
WARNING

This product does not conform to Federal Motor Vehicle Standards and is not intended for operation on public streets, roads or highways. Serious injury can result from the unsafe operations of this product. Operator can minimize these risks by using certain safety equipment such as: safety helmet, goggles, gloves, elbow and kneepads and appropriate footwear.

DO NOT operate this product in traffic, on wet, frozen, oily or unpaved surfaces or under the influence of drugs and/or alcohol. Avoid uneven surfaces, potholes, surface cracks and obstacles.

DO NOT use a water hose to clean this product. See Product Handbook for more information.

This product is recommended for riders 14 YEARS OF AGE and older.

SAFETY

- Persons without excellent vision, balance, coordination, reflex, muscle and bone strength and good decision-making capabilities should not use this product.

- Minors without adult supervision should not use this product.

- Persons unwilling or unable to take responsibility for their own actions should not use this product.

- The user of this product assumes ALL risks associated with its use. To minimize these RISKS, the user must wear safety helmet, goggles, gloves, elbow and kneepads and appropriate footwear.

- This product is ELECTRIC! DO NOT ride this product in wet conditions, puddles or rainy weather.
SAFETY GUIDE

- The recommended minimum age for riding this scooter is 14 years old.
- To avoid damage to the motor and footplate, do not overload the scooter.
- Never ride with more than one person.
- Inspect your scooter thoroughly before each use for loose or missing parts.
- Avoid unintentional starts by turning the scooter off while not in use.
- To avoid the risk of a short circuit in the electrical parts, do not use your Electric scooter in the rain and never spray or wash off your scooter with water.
- Do not place the battery near fire or heat.
- To avoid damage to the battery, do not use the charger if it has been damaged in any way.
- Keep hands, face, feet and hair away from all moving parts.
- Do not touch the motor or wheels while they are rotating.
- Brakes are designed to control speed as well as stop the scooter. Practice braking for proper slowing down and smooth stops.
- Maintain your SCOOTER as recommended in this Product Handbook.
- Use only quality replacement parts as recommended by the manufacturer.
- Inspect the entire scooter prior to each use. Replace any part that is cracked, chipped or damaged before use.

*NEVER ALLOW CHILDREN TO OPERATE THE SCOOTER WITHOUT ADULT SUPERVISION.

*NEVER ATTEMPT TO OPERATE THE SCOOTER WHILE UNDER THE INFLUENCE OF ALCOHOL.

If a situation arises that is not covered in the manual, proceed with caution and use good judgment.

Contact your dealer if you need further assistance

Throttle

Front Suspension

Front Disc Brakes

145/70-6 Kenda tire

Front Light

Deck

Patent New Style Seat

Rear Light

Rear Brakes

Rear Shocks
PACKAGE CONTENTS
Your Scooter comes with the following items in the box. Please locate all of the following:

1. Scooter
2. Battery Charger
3. Tool Kit User Manual and Fuses (if you choose the lead acid battery)
4. Seat and Seat Post

GETTING STARTED

Please read and understand these instructions and the OPERATING PROCEDURES section, prior to starting or riding your scooter

Assembly

1. Carefully remove the scooter from the box. Raise the kickstand to its upright position.

2. Then install the handlebar please.
3. Fully extend the handlebars to their upright position until you feel the mechanism lock into place.

4. Attach the handlebars by inserting the black handlebar clamp onto the handlebar post stopping just below the top. Be sure to orient the bars in the correct riding position with the throttle on the rider's right side. Secure the handlebars to the post by tightening the bolts on the clamp with the enclosed Allen wrench as shown.

5. Secure the hand brakes in place by using the provided Allen Wrench to first loosen the tension bolts. Adjust the levers to a comfortable position and tighten the bolts. *BE CAREFUL NOT TO PULL ON THE CABLES!

Assembly – Cont:

6. Tighten the seat bolts as shown.
Know More How To Operate The Scooter:

1. Turn the ignition key.

2. Turn the Throttle. Then the scooter will go.

3. The black button is 2 speed button. Speed limited 25 km/h.
4. The green button is horn. (Some discovery model come without this button, please ignore it.

5. Throttle come with battery status. Green light means full battery capacity. Yellow light means half battery capacity. Red light means battery empty, you need to charge it.

6. The red button is second time starting button. When the kick stand to its upright position, press the red button, then the throttle power will turn off, the scooter can't go.
CHARGING

Your scooter comes charged out of the carton. We still recommend charging the unit for 4-8 hours prior to its first use. We also recommend charging your scooter after each use and prior to storage.

WARNING: Do not allow your scooter to go into deep discharge, as this will damage the batteries.

1. Make sure unit is turned off.
2. Open the charging socket cover located on the right side of the scooter frame, under the footplate.
3. Locate your Battery Charger. Find the charger socket end that has a three-prong socket and plug it into the scooter.
4. Next, plug the AC plug into a wall outlet.

When first plugged in, the charger has one red light that will illuminate at the same time, indicating that the charging process has started. Once the light on the charger turns green, you may remove the charger and close the safety cap.

RIDING

1. Make sure that all of the exposed bolts and screws are tightened.
2. Raise the kickstand to its upright position.
3. Push the on/off switch (located on the left handlebar) to the ON position.
4. Put one foot on the deck of the scooter while pushing off with the other foot, gently rotate the THROTTLE GRIP, on the right side of the handlebars. The discovery will begin to move on its own power.

**Your scooter has a variable speed hand throttle. You can control the speed of your scooter by the amount of pressure you use when rotating the hand throttle. The more you rotate, the faster you will go.

STOPPING & BRAKING

1. To brake, release the THROTTLE GRIP and depress the BRAKE LEVERS (on the left/right side of the handlebars). Depressing the brake will disengage power to the motor. When the unit feels like it is loosing power or not accelerating to full speed,
the scooter is ready to be re-charged.

NOTE: If the on/off switch is left in the ON position for more than 10-15 minutes without moving, Smart Power will shut itself OFF. To reset, turn the unit OFF, wait a few seconds and then switch it back ON again.

**FOLDING & STORAGE**

When you are done riding the scooter you can fold it down for compact storage and transportation. First remove the seat post and seat, then using one hand, push down on the folding handle while gently pushing down on the handlebars. **BE CAREFUL NOT TO HIT YOUR HEAD WITH THE HANDLEBAR, SET YOURSELF AT THE RIGHT SIDE IS NECESSARY.** Push down until you feel the mechanism lock into the down position.

**BRAKING SYSTEM**

The scooter uses a pinch braking system for the front, and a disc/caliper system for the rear. They are both activated by a hand brake lever on the left and right side of the handlebar. Squeezing the hand brake lever with your left hand activates the rear brake. Squeezing the hand brake lever with your right hand activates the front brake. Make sure to release the HAND THROTTLE GRIP when engaging the brakes. Your Discovery is equipped with switches on each brake lever that will disengage power to the motor when the brake levers are depressed.

Practice braking on a smooth, dry surface to get used to the feel of the braking system. Braking distance is affected by wet conditions and loose and uneven riding surfaces.

**Adjusting the Brakes**
The Brakes on the scooter should come fully adjusted from the factory. However, it may be necessary to adjust the brakes from time to time.
To adjust the rear brakes:

For brakes that are adjusted too loose:
1. Adjust the tension screw on the right hand brake lever by rotating it counter-clockwise until the wheel spins freely.

For brakes that are adjusted too tight:
2. Tighten the tension screw on the right hand brake lever by rotating it clockwise until the wheel has a slight drag.

To adjust the front brakes:

For brakes that are adjusted too loose:
3. Adjust the tension screw on the left hand brake lever by rotating it counter-clockwise until the wheel spins freely.

For brakes that are adjusted too tight:
4. Tighten the tension screw on the left hand brake lever by rotating it clockwise until the wheel has a slight drag.

For Further Front Brake Adjustment
5. Locate the adjustment screw on the front brake assembly (located above the front wheel). Tighten or loosen as necessary.

For Further Rear Brake Adjustment
6. Locate the adjustment screw on the rear brake assembly (located on the left side of the back wheel). Tighten or loosen as necessary.

**SQUEAKY BRAKES**
The brakes may squeak before they are broken in. This is normal and will not affect the function or performance of the brakes. With continued use the squeak should go away.
**TIRE PRESSURE**
The tire must be inflated to a maximum of 36 P.S.I. It is also recommended to use a tube additive like *Slime*, available from any motorcycle shop, to avoid inconvenient punctures.

Empty all air from the tire, prior to loosening the bolt to split the rim.

**MAINTENANCE**

**RECOMMENDED TOOLS**

To adjust and service the scooter you will need the following tools:

- Allen Wrenches: 3/4/5/6 mm
- Wrenches: 10/13/13 mm Open end wrench
- Large Adjustable Crescent Wrench
- Philips Head Screwdrivers
- Oil, Grease or Lubricant

This will result in shortened chain life.

**How tight should the chain be?**

- If the chain is skipping or jumping on the sprockets, this is too loose and may be harmful.
- If the chain is making a humming sound when the wheel is turning, this is too tight and may cause the chain to snap.
- The correct tension is achieved by adjusting the chain from its loose position to when it becomes lightly tense.
MAINTENANCE SCHEDULE

Proper care of your scooter will insure optimal performance and longer life span. The following are a few maintenance suggestions that will keep your scooter running in top condition:

Daily Maintenance
Perform each time you ride your scooter
- Clean the exterior of the unit with a soft, damp rag. (DO NOT WASH WITH A HOSE)
- Check that all nuts and bolts are securely tightened.
- Lubricate the chain with any silicone spray, 3&1 oil or any good clean motor oil.
- Check battery charger for any frayed/cut wires.

To tighten the chains:

Slightly loosen the two axle bolts on both sides of the rear wheel. Then slowly adjust the two adjusting screws on each side of the rear tire until chain reaches the proper tension.

Rotate the rear wheel to make sure the chain is aligned.
Finally, lock and tighten the rear axle bolts prior to riding.
## TROUBLESHOOTING GUIDE

<table>
<thead>
<tr>
<th>SYMPTOMS</th>
<th>POTENTIAL CAUSE</th>
<th>SOLUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>The charger light turns green &amp; red right away</td>
<td>1. This indicates the batteries are adequately charged.  2. Bad Fuse or open connection between charger socket and batteries.</td>
<td>1. Continue to charge the batteries for 6-8 hours prior to initial use.  2. Check Fuse: Look for loose or disconnected wire</td>
</tr>
<tr>
<td></td>
<td></td>
<td></td>
</tr>
<tr>
<td>Batteries do not hold a charge. Unit does not have specified travel range.</td>
<td>1. Batteries have reached the end of their useful life.  2. Charger is malfunctioning.</td>
<td>1. Replace Batteries  2. Replace Charger Unit.</td>
