Safety Instruction (Please take note of the followings before each Ride.)

. The maximum weight capacity is 300lbs.
. Only one person at a time should ride.
. Always wear protective gear including knee and elbow pads and an approved safety helmet when riding the scooter.
. Before riding be sure to check that all pivot points, locking buttons, quick releases, and latches are secured properly.
. The power switch lock must be in the “off” position when the tri scooter is being charged.
. Do not use the scooter when it is raining.
. Do not place the battery near heat or fire.
. Do not expose the charger near water.
. Check if battery after each use.
. Always ride on dry paved surfaces. Wet and uneven surfaces are a hazard.
. Send and loose impediments are your enemy, avoid them.
. Never operate too fast for your skills or condition.
Fast Installation

1. Inset front wheel with bike and across the bolt(2pcs), then screw them.

2. Handlebar. Put the handlebar on bike. And make 4 screws tight.
3. Fix brake bar.

4. Install Seat. Please check the screw tight when you ride it.
5. connect 4pcs wires.
To ride, plug the ket into ket ignition and turn the key to the "ON" position. The battery gauge will illuminate indicating that the battery is in operation.

Hold onto the handlebars with both hands. Your left fingers will control the byakes and your right thumb will control the thumb throttle. As you depress the throttle lever with your thumb the speed will increase. Release the thumb throttle and apply the brake to stop the scooter. You will control the speed of the scooter by using both the throttle and the brake. When the brake handle is squeezed it cuts power to the throttle.

NOTE 1: You may use the balancing wheel (the smaller rear
wheel) to balance the scooter when you want to ride with the front wheel raised.

WARNING: Never try stunts beyond the control of your skills. Never ride too fast for your skills or condition.

NOTE 2: When scooter is parked, press the power switch button, to the “OFF” position; this will avoid anyone from accidentally pushing the throttle causing the scooter to speed forward. Failure to do this could lead to an accident.

FOLDING THE TRI SCOOTER

1. Unplug the power connecting plugs.
2. Unscrew the bolts and nuts from the connecting tube clamp using the enclosed allen wrenches.
3. Lift the connecting tube (which is also attachment to the handlebar tube).
4. Carefully place the handlebar tube on the footrest frame.
5. Finger screw the bolts and nuts back to the connecting tube clamp to avoid any misplacement.

MAINTENANCE

Battery: (for professional use only)
The scooter is powered by 8pcs 12Ah12V rechargeable batteries secured in a battery bag. Other than recharging, these batteries need no maintenance. To prolong battery life, you must recharge the battery after each use. You must also charge your scooter if it has not been used for 30 days or more. If you must replace the batteries, they are located at the battery compartment at the footboard. To get them, remove the batteries with new ones and reconnect the wires. Follow the instructions on charging batteries to charge the new batteries.
